The **A.J.S.**

2.48 h.p. LIGHTWEIGHT MODEL

THE 250 c.c. A.J.S. is a new-comer to our range of models, and is being placed on the market in response to an insistent demand for a smaller edition of our famous 350 c.c. Side Valve models.

As is the case with all A.J.S. productions, this new machine is built to an Ideal—not to a Price, and the most modern improvements in design and construction have been embodied.

Its sturdy build, simplicity of design and straightforward lines will be apparent from the illustration, and it is a striking example of a machine bearing the highest attainable degree of quality compatible with its price, this being ensured by the fact that, like all other A.J.S. motor cycles, it is built from start to finish in our own works.

The steady developments and improvements which have taken place year by year are all to be found in the A.J.S. Lightweight Model K 12, which for general utility work for either sex will be found to be Ideal, as it is light in weight, has a very low riding position, is easily handled and capable of going anywhere with the maximum of comfort and economy.

Bearing in mind that this machine is essentially a quality production, we have no hesitation in claiming that, at its price, there is no better value obtainable.

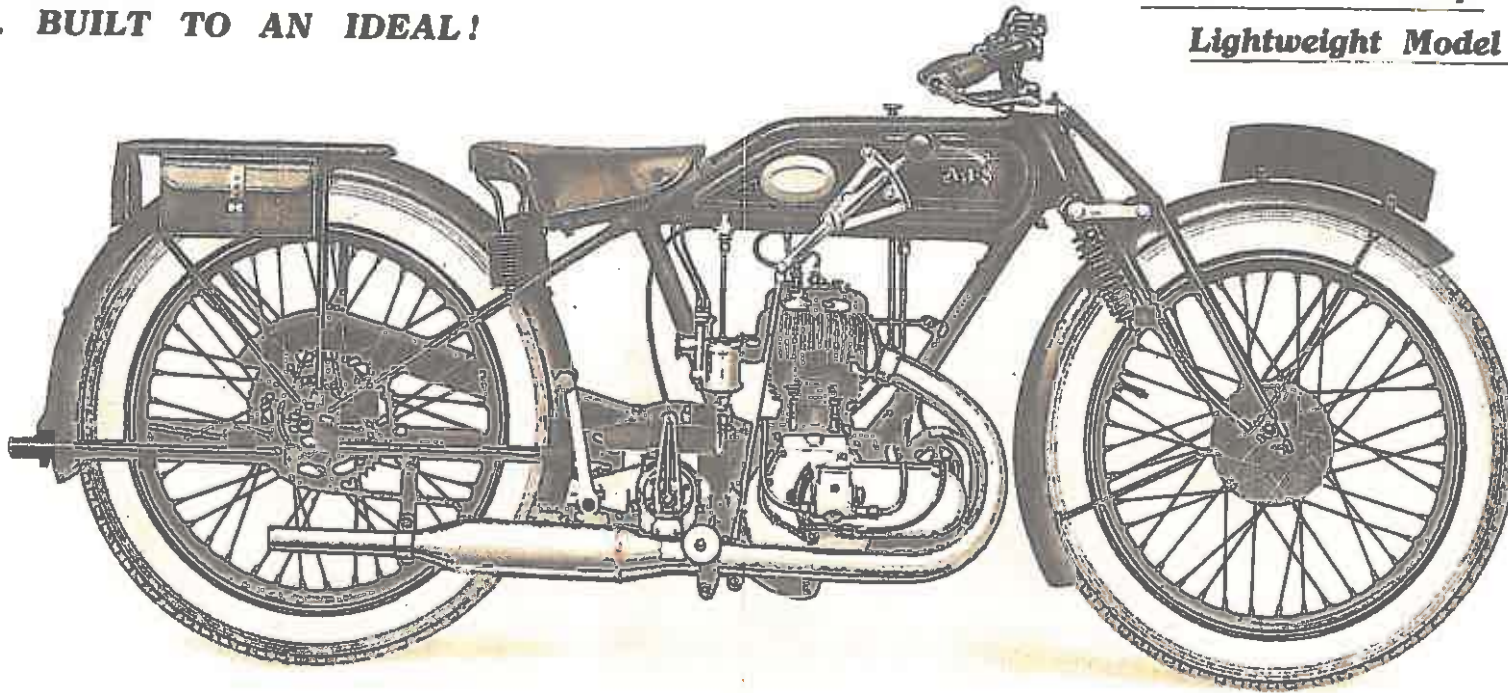

AN IDEAL MACHINE

BUILT TO AN IDEAL
